Potential Areas of Landslide Susceptibility in Colorado Springs, El Paso County, Colorado

By Jonathan L. White and T.C. Wait

2003

EXPLANATION

DESCRIPTION OF MAP UNITS

Landslide Susceptible Areas: The shaded cloudburst map covers the areas of greatest probability for landslide occurrence. Susceptibility is based on past landslide activity in the area. The susceptibility areas are generally those that have evidence of past landslide activity and are considered to be prone to landslide occurrence. This susceptibility area is not intended to be a complete listing of all landslide areas that may have occurred in the area.

Landslide Inactive Areas: The shaded cloudburst map covers areas where past landslides have occurred, but there is no evidence of recent landslide activity. This area is not intended to be a complete listing of all landslide areas that may have occurred in the area.

Landslide Susceptible Areas: The shaded cloudburst map covers areas where past landslides have occurred, but there is no evidence of recent landslide activity. This area is not intended to be a complete listing of all landslide areas that may have occurred in the area.
